THE UNIVERSITY *of* WISCONSIN MADISON

The BibApp

Eric Larson, Nate Vack

What has your repository done for you lately? The Rails-powered BibApp is the ultimate mashup of article databases, citation management software, and digital repositories. To date, it's helped us add over 2000 articles to our repository by organizing citations, identifying articles we can archive, and generating DSpace import packages. It also lets us analyze research produced on campus, illustrating popular research topics, departmental affiliations, and collaborative relationships between researchers.

Focus Groups

Participants

- 17 Faculty, Researchers, Administrators
- College of Engineering
- School of Medicine and Public Health
- School of Nursing
- English Department

Wants

- Non-tenured - comprehensive
- Tenured - non-comprehensive
- Administrators - productivity measurement tool
- Librarians - want nothing faculty want
- Everyone - want the library to help

What is it?

The BibApp is an 'Institutional Bibliography'. The service matches people with citations. Once the data is captured, Librarians look for archivable works and can engage people in personalized copyright instruction.

Who works on this?

We are a small, but committed group of librarians and technology staff from these two great universities.

- University of Wisconsin-Madison
- University of Illinois Urbana-Champaign

And a few people sprinkled elsewhere, who participate a little bit. We call them Friends.
